Appropriate engineering controls

Engineering measures to reduce exposure:

Ensure adequate ventilation. Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

Individual protection measures, such as personal protective equipment

Personal Protective Equipment

Eye protection: Safety glasses with side-shields

Skin and body protection: Long sleeved clothing
Chemical resistant apron
Gloves

Respiratory protection: Effective dust mask. Use a dust respirator under conditions where exposure to the substance is apparent (e.g. generation of high concentration of dust (dust clouds) , inadequate ventilation, development of respiratory tract irritation), and engineering controls are not feasible. Be sure to use an approved/certified respirator or equivalent.

Hygiene measures: Avoid contact with skin, eyes and clothing. Wash hands before breaks and immediately after handling the product. When using, do not eat, drink or smoke.

Symptoms

Skin Contact: May cause skin irritation.

Eye Contact: May cause eye irritation.

Inhalation May cause irritation of respiratory tract. Symptoms may include coughing and shortness of breath.

Ingestion May cause gastrointestinal tract irritation with nausea, vomiting, colic, cramping, and diarrhea. May affect behavior/central nervous system(somnolence, trembling, incoordination, fatigue, headache, weakness, listlessness, coma). May cause anorexia and dyspnea. There is a correlation between high molybdenum content in food and the incidence of gout, uricemia, and xanthine oxidase activity. In animals, studies have shown that Molybdenum may interfere with copper metabolism.

Aspiration hazard No information available.

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Chronic Toxicity Prolonged or repeated ingestion may affect the blood (normocytic anemia, changes in serum composition), metabolism (weight loss), teeth (changes in teeth and supporting structures), and urinary system.
Inhalation: Chronic exposure of workers in molybdenum-copper plants has produced liver dysfunction (liver function tests impaired, fatty liver degeneration) with hyperbilirubinemia.
Chronic exposure may also affect behavior/central nervous system and cause joint and muscle pain
Medical Conditions Aggravated by Exposure: Pre-existing respiratory, kidney, or blood disorders, or gout.
